## **DETAILED ACTION**

This application is a divisional application of 09/086,010, filed May 27, 1998, now patent 6,274,338, which is a continuation in part of 09/030,579, filed February 24, 1998, now abandoned.

Applicants' amendment filed April 3, 2003, paper number 8, has been received and entered. Claims 33-38 have been added. Claims 27-38 are pending and currently under examination.

## Election/Restriction

Applicant's election without traverse of group II, claim 28, in Paper No. 8, is acknowledged. In light of the addition of newly added claims 33-37, the previous restriction requirement has been withdrawn and a new restriction requirement is being made.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 27, drawn to a method of detecting the presence of human c-Maf in a biological sample, classified in class 530, subclass 387.1.
- II. Claim 28, 33-38 drawn to a method for modulating human c-Maf activity in a cell, classified in class 435, subclass 325.

Page 3

Art Unit: 1632

III. Claims 29, 30 and 32, drawn to method to identify a compound that modulates the activity of a human c-Maf protein comprising evaluating the binding of a human c-Maf and a DNA molecule, classified in class 435, subclass 6; class 435, subclass 7.1; class 435, subclass 325; class 435, subclass 69.1.

IV. Claims 29, 31 and 32, drawn to method to identify a compound that modulates the activity of a human c-Maf protein comprising evaluating the expression in an indicator cell, classified in class 435, subclass 6; class 435, subclass 7.1; class 435, subclass 325; class 435, subclass 69.1.

Claims 29 and 32 are generic to both groups III and IV and will be examined to the extent they encompass the elected invention.

The inventions are distinct, each from the other because of the following reasons:

Inventions I -IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different and separate methods requiring different method steps, and which result in the identification materially products. The method of group I requires a product which can be used to detect c-Maf protein, such as an antibody, the method of group II requires a specific compound which modulates the activity of c-Maf, and the both methods of groups III and IV require no knowledge of the compounds tested and are drawn generally to methods in which these compounds can be identified, however each groups uses a different indicator to test

Art Unit: 1632

the compounds. Thus, each group requires different starting materials and different method steps to practice. The compounds used for each method, i.e. detecting, modulating and testing are not co-extensive in activities and would require a separate search and consideration. Further, each method results in a materially different outcome when practiced.

Page 4

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

In addition, this application contains claims directed to the following patentably distinct species of the claimed invention: The methods of group II are drawn to the analysis of different types of modulation: (1) inhibiting c-Maf activity (claim 33), and (2) stimulating c-Maf activity (claim 34). Furthermore, this application contains claims directed to the following patentably distinct species of the claimed invention: The methods of group II are drawn to analyzing different forms of modulation: including affecting modulation of: (1) the c-Maf polypeptide (claim 35), (2) the c-Maf gene (claim 36), and the c-Maf mRNA (claim 37). Finally, this application contains claims directed to the following patentably distinct species of the claimed invention: The methods of group II are drawn to the analysis of different types agents: (1) antisense nucleic acids, (2) antibodies, (3) dominant negative inhibitors, (4) c-Maf nucleic acids, and (5) chemicals (all in claim 38). Applicants are required to elect one from each of these three different patentably distinct groups of species listed above.

Art Unit: 1632

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, because of the open language of "comprising" recited in the pending claims, claims 28 is generic to all the indicated species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Page 6

Art Unit: 1632

In addition, this application contains claims directed to the following patentably distinct species of the claimed invention: The methods of group III are drawn to the use of different types of indicator complexes: (1) c-Maf protein by itself; (2) c-Maf protein and a DNA molecule to which c-Maf binds; and (3) a cell containing a reporter gene construct comprising a specific promoter sequence operatively linked to a reporter gene.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, because of the open language of "comprising" recited in the pending claims, claims 29 is generic to all the indicated species because of the presence of at least a c-Maf protein in the indicator complex.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1632

Should applicant traverse on the ground that the species are not patentably distinct,

applicant should submit evidence or identify such evidence now of record showing the species to

be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission

may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

named inventors is no longer an inventor of at least one claim remaining in the application. Any

amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the

fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Joseph Woitach whose telephone number is (703)305-3732.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Deborah Reynolds, can be reached at (703)305-4051.

Any inquiry of a general nature or relating to the status of this application should be

directed to the Group analyst Dianiece Jacobs whose telephone number is (703) 308-2141.

Papers related to this application may be submitted by facsimile transmission. Papers

should be faxed via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers

must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15,

1989). The CM1 Fax Center numbers are (703)308-4242 and (703)305-3014.
